

INTUBLADE BUYER WORKSHEET

Video Laryngoscope Department Evaluation Scorecard

A four-page worksheet for device fit, controlled simulation, QA/QI, and rollout planning.

Use this worksheet before, during, and after a video laryngoscope evaluation. It is a purchasing and workflow aid. It is not a clinical protocol and does not establish patient outcomes.

DEFINE THE DECISION

Organization	
Evaluation owner	
Clinical or medical-director reviewer	
Training lead	
Security or privacy reviewer	
Procurement lead	
Primary use case	
Estimated quantity	
Target decision date	
Current video laryngoscope	
Phones or tablets planned for use	

0 · Not reviewed	1 · Does not fit	2 · Follow-up needed	3 · Fits requirement	GATE · Resolve before deployment
------------------	------------------	----------------------	----------------------	----------------------------------

Decision statement

Write the decision this evaluation must support. Be specific about users, locations, devices, blade sizes, training, QA/QI, and purchasing requirements.

Device and controlled-simulation checks

0 · Not reviewed	1 · Does not fit	2 · Follow-up needed	3 · Fits requirement	GATE · Resolve before deployment	
------------------	------------------	----------------------	----------------------	----------------------------------	--

Requirement	Evidence observed	Score	Gate?	Owner	Follow-up
Exact phone or tablet model checked for compatibility					
Wired USB-C live view confirmed					
Required Macintosh Sizes reviewed among Sizes 1–4					
Common Macintosh geometry reviewed with clinical leadership					
Single-use blade workflow reviewed					
Blade charging, cleaning, and reprocessing requirements understood					
Standard 10 mL male luer-lock saline syringe supply identified; syringe not included					
Lens-clearing pathway reviewed in controlled training or simulation					
Training and current instructions for use reviewed					
Local clinical policy requirements recorded

Complete training, simulation, and deployment under your organization's clinical policy and the current instructions for use.

Capture, review, and governance

Requirement	Evidence observed	Score	Gate?	Owner	Follow-up
Procedure media and case details available for review					
Clinician, reviewer, and administrator roles reviewed					
Outcome selection reviewed					
Reviewer notes reviewed					
Structured QA checklist reviewed					
Follow-up flag reviewed					
Save and download workflow reviewed					
Department metrics view reviewed					
Media retention question answered					
Access-control question answered					
Security, privacy, and BAA requirements recorded					
Downtime or offline requirements recorded					

Published evidence boundary: A 2021 IntuBlade evaluation involved 21 emergency physicians using a high-fidelity airway manikin. The reported results are simulation data, not patient outcomes. The authors called for additional clinical evaluation. Read the methods, results, and limitation at intublade.com/research.
